Influence of technology on future of human resource management

Abeda Sultana

Abstract
In nowadays, role of Technology has been increased worldwide. Top leaders of global trade are fully aware of the IT tools to achieve business targets. These tools not only help in achieving goals but are also helpful to optimize the activities of a business. This paper will give a brief overview of possibilities of Information Technology, in the field of Human Resources for measuring the effectiveness of human capital and use of HR information properly. Our world has become a king of global trade which is, no doubt, is possible, only because of effective technology. These improved means of technological advancement and information have changed the functioning of business world in a great way. The impact of technology can be easily observed in all the areas of business. IT has created a significant impact on increasing the efficiency of development, and functioning of the employees. This paper is an attempt to study the effect of technology on Human Resource Management.

Keywords: Human resource management, technology, information technology, organization's objectives, recruitment, human resource development

Introduction
Human Resource Management (HRM) includes its managerial functions- Planning, Staffing, Directing, Organizing, Motivating, Developing, Controlling. It aims at achieving the heights in the field of HR competition by providing proper education, training, appropriate compensation and by motivating them to attain the personal as well as Organizational development. Human Resources Management is of great importance while studying any organizational behavior. Management of Human Resources and need of HR has become the main importance for the employers in all the organizations. Human Resource is the key element for any business. They play an important role in strategic management. They get to know the problems of an organization and with various strategies; they solve them by motivating the employees and helps in increasing the performance of an organization. HR people are the essence of any organization. If we create a better work environment to them, and move according to them, the success of company will be achieved and the productivity will also increase definitely.

It has proved that HR activities can be improved by the Information and Communication Technology (ICT), i.e. internet, media, network communication. They help in contributing for achieving targets of the organization and fulfillment of its personnel policies. Advancement in technology has created a great impact of HR department of any business. It helps to company in improving its ongoing process, core competencies, and making the best organizational structure. Human Resource must be focusing on the strategic objectives of the business mainly. These strategies help in incorporating a technological advanced plan for the organization. These activities are related to the development of the technological systems of the business, such as research and development of IT systems. Technological Advancement has become an important part for the innovation process within the organization, and it includes knowledge acquired by HR professionals. In short, all the activities have some technical content, which, in the end, will result in greater technological advancement.

With the help of technology, automation has become advanced to create an era for HR professionals, who are not only administrator for any organization but also the strategy makers and key for taking decisions for the business. Technology advancement moves parallel to the needs of HR which keeps on changing as per the business environment. Over the past decade, HR and the technology are moving together to great lengths to achieve the
success in the industry. With an increased dependency of business on HR and Technology, we are, today, amid around billions of dollars in the industry. Information Technology created a great impact on organizations which are existing in a dynamic environment. It will lead to greater efficiency and effectiveness of the Human Resources. Hence, by using IT application for database management system and advanced recruitment system, efficiency of the business will be increased.

“As money comes to HR technology, so do new ideas and smart people.” Human Resources are one of those parts of industry, which are not only working in the organization, but are also responsible for the working and functioning of the organization. The industry, has changed, so, the technology also needs to be advanced, so that HR Professionals can perform their job easily and smoothly. Technology has changed Human Resource Management in a number of ways. The impact of rapid changes in technology and its evolution has made India; take this issue seriously to be a part of the world trade. Indian organizations needs to cope up with it, and create a highly developed workforce, get them trained, motivated and make them efficient with skills require moving with technology advancements.

Statement of the Problem
Many researchers have studied about the changing role of HR function in the past. HR is no longer, restricted to manpower only, but now technology is equally important. HR Personnel keeps them involved in changing the HR processes with the help of latest technology. The use of Technology in HR is helpful in reducing cost, improving services, and achieving effectiveness. The present study has been made, keeping technological factor in mind.

Methodology
Both Primary and Secondary data are used for our study purpose. The secondary data is collected from various websites, books, published articles and other sources. The study has been made to examine the technological tools which can be used for HR Planning, Recruitment, Employees Engagement, Communication, Maintenance and Development of the employees.

Objectives of the Study: The study seeks to explore the answers of the following questions:

- What is the scope of IT in HRM?
- What are the opportunities for implementing technology with HRM?
- What are the impacts of Technology on HRM?
- What are the challenges associated with HR Technology?

Scope of IT in HRM: Use of Technology (IT) in HRM has been widely increased because it is helpful for various purposes:

1. HR Planning: Right personnel at the right place are motto for HR planning. With the help of technology, technical database is created, where various important information about the employees can be stored, which helps in determining, if the individual is suitable for a particular job or not.

2. Administration: All the necessary data is identified within the organizational employees, like their names, their address, email-id, contact no., strengths, salary, date of joining in the organization, employment status whether they are full time or part time employees, etc. can be stored in a database which can be used anytime.

3. Recruitment: With the help of technology, process of recruitment. Internet has created a great change in the enrollment procedure during the last decades, as it acts as the intermediate between the organization and the job seekers.

4. Training and Development: With the help of technology, E-learning is introduced. It is a very progressive approach which helps the workers in keeping pace with quickly changing market. By introducing the change in HR database with technology, the E-learning platform can be used.

5. Compensation: Technology has made easier to calculate the accurate compensation and benefits given to the workforce. The E-pay bundles provide direct and easy access in assessment of data for calculating compensation.

Opportunities for implementing IT with HR function
By implementing technology in the organization in the form of IT, various opportunities can be availed by the Business, which are also helpful in being the part of competitive global trade.

- Competitive Usage: By providing customized applications with the help of E-HRM, HRM portals can be used as a key element for technological advancement of the organization.

- Accessibility: With the help of latest technology, data has become accessible for everyone, via internet. If anyone wants any information, he/she can get the information easily and effortlessly.

- Fast and accurate changes: Technology has expanded the speed of administration in companies, and is also helpful in removing errors which are occurred during human usage.

- Interactive Environment: Technology has improved and increased the interactions among all the levels of the organization. In large organizations, where there is a need of more data, they can take the help of electronic gateways while small and medium organizations, spreads their data over various areas of need.

Impacts of Technology on HRM: Innovations such as technology have become advanced with Information Technology (IT) which helps in creating a positive impact on Human Resources. Rosabeth Moss Kanter, who was one of the leaders of management theories, stated that the success and survival of business organizations are totally dependent on technology and innovation which includes innovating new ideas, creating new products, introducing new services, and methods of operations. It encourages decision making and participation on giving innovative ideas at all levels of the organizations. However, technology in Human Resource Management can help in no. of ways:

1. Providing Better services to Managers: Both HR and other Line managers are the main assets in the success of any organization. The main function of HR is to support the needs of its workforce. Strategic plans are made by all the HR and line managers for the various projects which are helpful in achieving primary objectives of the organizations. They also decide whether to train the existing employees or to promote
them or to recruit new candidates with high level of skills to help in achieving goals. Training and development, as per the advanced technology must be provided to line managers to prepare them for performing leadership tasks.

2. Enhancing management: Engaging the employees to organizational goals and linking them with their personal goals is the main feature of any business. The management must ensure that the whole organization is improving their methods and activities for achieving company’s competitive objectives. Technological tools can help in increasing the efficiency and effectiveness of the organization. Managers measure their performance with benchmarks set by the organization’s head, and to analyze their performance, and to find out how to increase the performance. These can be best utilized by using customized HR technological tools.

3. Effective Recruitment: Today, the effective recruitment cannot be done without using technological tools. Various organizations are using online job portals to search for the suitable candidates for the job position by using internet. The effectiveness of this process has increased as many people come to know about the job offers and hence the possibility of recruiting more appropriate employees increases. Employers also provide all the necessary details related to job, qualification, career and other information online on the portals. It has become an effective tool for both the organization and the job seekers. These technological tools not only help in recruiting the employees but are also helpful in retaining them.

4. Data management and its analysis: Data management has become easier as it becomes paper free and use of technology has improved it. There is no need to do manual work. It also helps in increasing efficiency of the work and the work effectiveness. Performance of organization can lead to the success of the business in the competitive global environment. Performance of employees can be easily analyzed critically with the help of technological tools and become accessible to everyone. For ex. The company Zenfits has developed a new HR tool, which has made the passport paperless. This tool is also used for pinging the approval of manager, once it is approved. It helps in letting the individuals get rid of the paperwork. Thus by the help of various technological tools, many works can become easier.

5. Stock management tools: Leading entrepreneurs have said that, the organizational performance can become more effective and efficient by customer involvement, efficiency in operations and leading in a proper manner. Customers need to meet customization by providing them better and accurate information. For this, organizations have to use HR technological tools to provide a suitable product and diversification of business by providing improved and better products and services than the competitor.

6. Reduction in Cost: Efficiency in costs can only be attained by providing various reports using technological tools. Considerable benefit can be obtained as various reports can be made using IT tools. Performance of organization can be increased by implementation of management by objectives and using participating style of management By HR technological tools. Organizational management is responsible for the business owner for the achievement of objectives. Performance of managers is justified only if their management is able to produce desirable results. For ex. They have to achieve a desired amount of profit in a specified time. Management often uses it Operational Research team for maximizing the profit and utilization of performance. Organizational management creates a system of measurement to set target for changing and measuring the performance of organization.

7. Services of Customer: Performance of organization has also described by evaluation of reliability of services by understanding the quality of customers of the business. Value of the business can come by providing a trustable service to the customers, so that they can receive the services on time, at a given time, at a fixed standard of performance. As change in organization is not evitable, important successful factors and main performance indicators are revised and HR technological tools are devised for providing better quality of work. Doing better quality of work, and by providing sound results, performance of organization is increased.

8. Development of Career and Human Capital Management: Career planning is a tool for learning and it is a knowledge based system, which helps a businessman in managing their personal development, and career path with other employees. Evaluation of performance and career progression are important motivating factors, for the employees for working efficiently and effectively. Measurement of performance and system of reward in a business establish its view of priority i.e. what is important and why? This economic and better performance evaluation system is an important tool for HR technological performance. This sound system must be one so that people can depend on it. This reward system should be reviewed so that managers and other employees can get their rewards on the basis of their performance stored in HR technological tool. Employees must get rewards for the performance based on their desired behavior and the results according to the technological tool database. According to Vroom, who is one of the best management theorists, reward system is affecting motivation for the increasing performance in organization. Managers should keep their promises that they will give reward for performance to the employees and to be sure that they will believe that the organization will keep its promises. However, the performance targets don’t need to be measurable with financial targets. They can be given in various other forms like promotion, recognition etc.

Challenges associated with HR technology
But there are some challenges too which are associated with the application of technology in the field of Human Resource Management. Some of them are:

1. Fetched: “Technology pulls out cost easier”. Yes, a technology-based HR policy is expensive, but once it is executed, it decreases the expenses incurred in operations. Many large growing organizations may introduce HR activity, while small and mid-size organizations, find it difficult to bear high costs.

2. Acknowledgment: Because of the use of technology, various issues like skills and knowledge for its usage,
its dangers in job and so on, dependably affect its
direction. Acknowledgment from the employees is
required because they are more connected with the
customers than the management and which is helpful
for the organization in attainment of goals.

is comparatively high and if we want to avoid hacking
to all arrangements, a lot of discussions is required on
these issues. With the discussion, it becomes easier to
know the problems where there is more need of security
and how it can be resolved with the help of technology.

4. Increasing Withdrawals: Due to the arrangement of
various networks via internet or E-HR gateways, the
individual connections between the members have
reduced. In the traditional frameworks, they connect
with the members, and were intrinsic towards the
organization. They are now disengaged, and can be
connected by all purposes by such technology only.

Conclusion
Better technology in Management can provide better
services to its employees. It will also be served as an
important tool in achieving the goals of an organization at
optimum cost. It also facilitates personal management in the
company. With the help of technology, important and useful
data is analyzed for making better strategies and taking
decisions. It also enables analysis of information for HR
assistants. It helps in reducing the labor costs.

In the field of HRM, technology has made a crucial change
in the organization towards reducing cost and increasing
efficiency of its employees. It also helps in reducing the
administrative expenses. It enables the organization in data
management, which is useful for taking important decisions.
It improves HR strategies and helps the organization to
attain their objectives. Although there are a few challenges,
but technology and HRM are now inseparable.
